

PROTOCOL GATEWAY
AND RULE MANAGER

DATA CONNECTOR

The federation of heterogeneous systems by the feedback of information through a single channel allows the opening and simplification of technical architectures for information systems dedicated to the safety and security of goods and people.

ITS OBJECTIVES

IPARTNER proposes an open protocol gateway allowing a functional enrichment of existing supervision systems. The integrated rules manager allows for fine-tuned management of interactions between the connected subsystems.

Through the DataConnector service, IPARTNER offers its integrator partners a powerful, integrated and customizable software solution to meet their customers' challenges and needs.

DATACONNECTOR FEATURES

Agile

The DataManager parameterization tool makes it possible to meet the most demanding operational needs in a simple way, without any IT development.

Integratable

DataConnector integrates and cooperates with monitoring center tools such as SCADA and VMS.

System Aggregator

DataConnector centralizes the data acquired from partner subsystems and transmits it for processing by the operator in his user interface or from his VMS.

Secure

The software architecture (Secure by Design), based on hot redundant services, ensures high availability of the operation.

IMPLEMENTATION WITH MILESTONE XPROTECT
