ITS OBJECTIVES

IPARTNER offers a unified supervision platform, for the safety of people and goods, composed of communicating and customizable software bricks.

Through its Plugins, IPARTNER offers its integrator partners a powerful, intuitive and customizable software solution to respond very simply to the challenges and needs of their customers.

PLUGINS FEATURES

Customizable

The user interface is built dependin to operational needs by assembling the different Plugins.

Integrable

Plugins integrate and cooperate with monitoring center tools, such as SCADA and VMS.

Systems aggregator

The DataConnector Plugin centralizes the data from partner subsystems and transmits them for processing by the operator in its user interface or from its VMS.

Secure

The client / server architecture (Secure by Design), based on redundant services, ensures high operational availability.

DataConnector

Federates all the Plugins and ensures the authentication of each component

PartnerGateway

Video proxy for interconnection of partner sites

WallControl

Multi-source video and media software decoding

EvidenceCapture

Capture of a critical or training IT station activity and synchronization with agent conversations as well as actions (e.g. keyboard input and mouse manipulation)

AlarmControl

Event and alarm processing workflow management

ReplayControl

Advanced replay module with multi-source synchronization

SequenceControl

Managing video cycles and display contexts for video walls

VideoControl

Management of visualization of video streams and control (PTZ)

DutyLog

Recording of technical and operational events

MapControl

Vector mapping and GIS management

VideoPushControl

Pilot the provision of snapshots or video extracts in an automated manner
